

(a) CT + organ masks (b) truncation control (>20 vox → out) (c) mesh → 2048 points

(d) per-organ descriptors

size — 7 per organ

centroid size · volume · area
bbox extents (3) · diagonal

scale-free — 8 per organ

eig. ratios (4) · aspects (2)
sphericity · normalized SA/V

16 organs × 15 = 240 features

(e) representations → models

descriptors (240)

→ XGBoost · RF · linear

SSM: ICP + PCA

→ same classifiers

points (2048×3)

→ PointNet + attn. pool

targets: sex · age

(f) same pipeline, MRI
